

Create a hello website

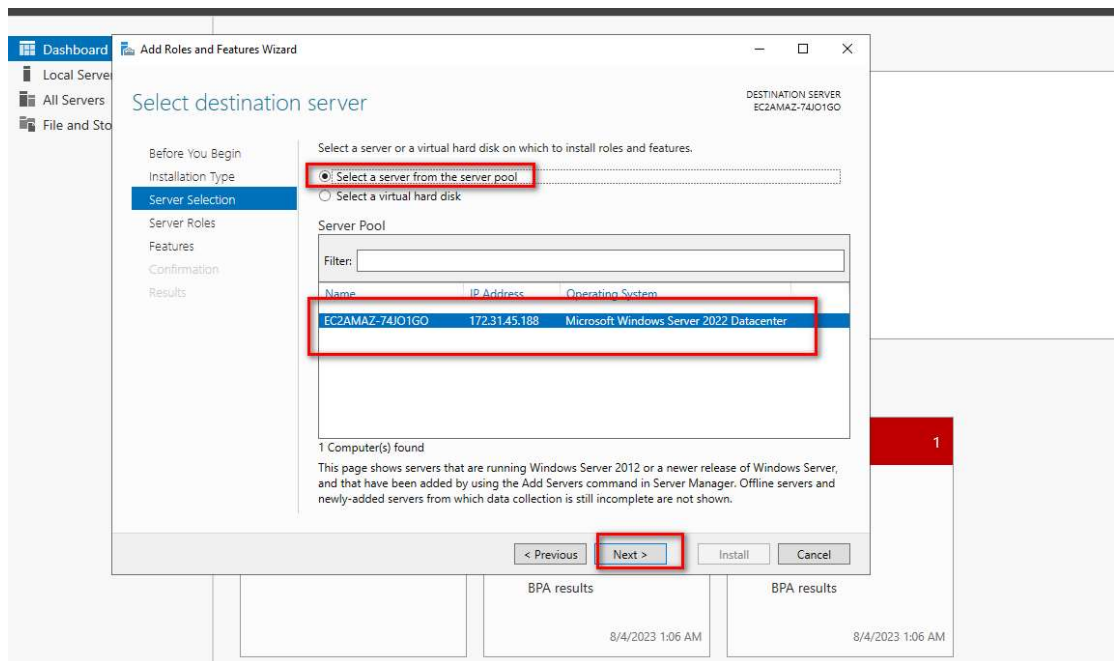

1. Open Server Manager in the Start menu:

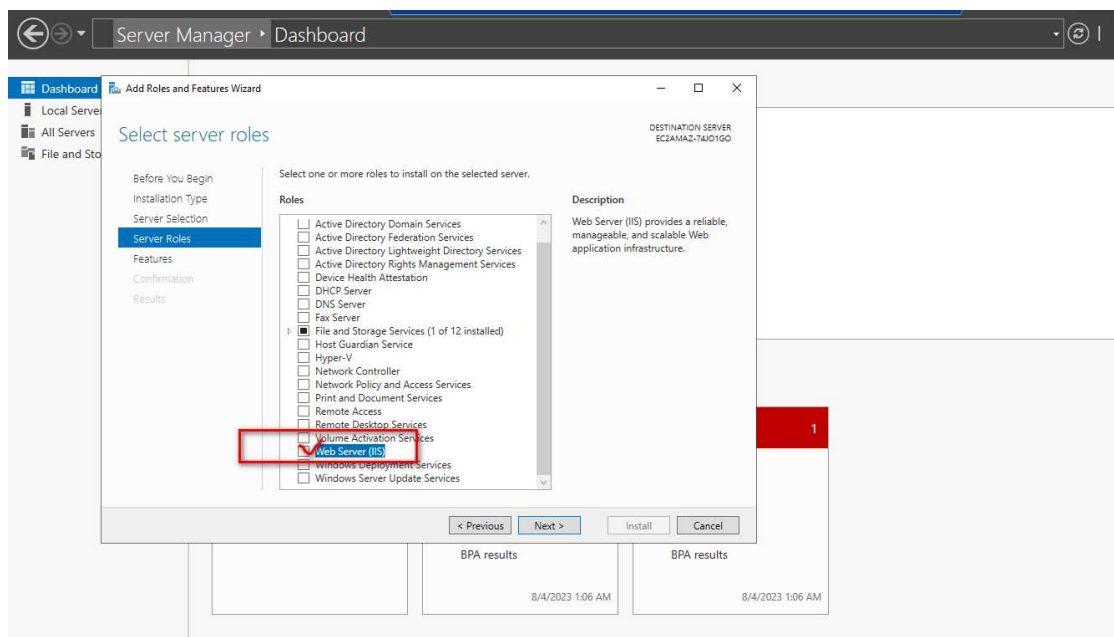

2. Click "Add roles and features"

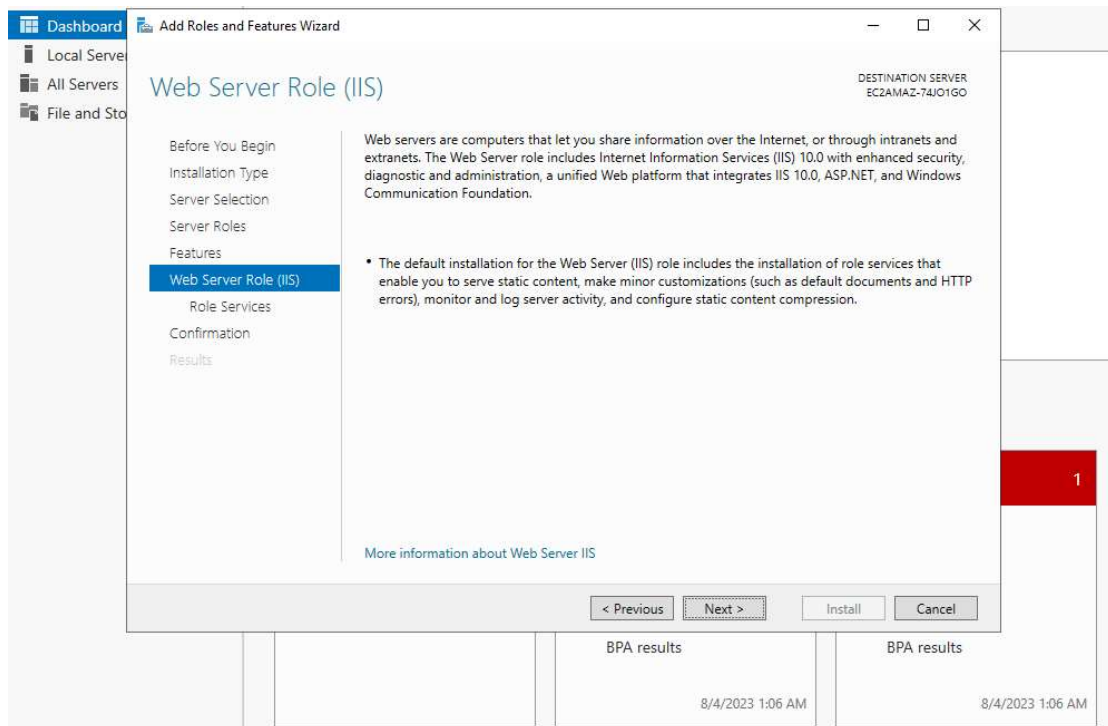

3. Select Role-based or Feature-based Installation to confirm the IP address. In normal cases, the IP address is the same as that in step 1 and does not need to be changed

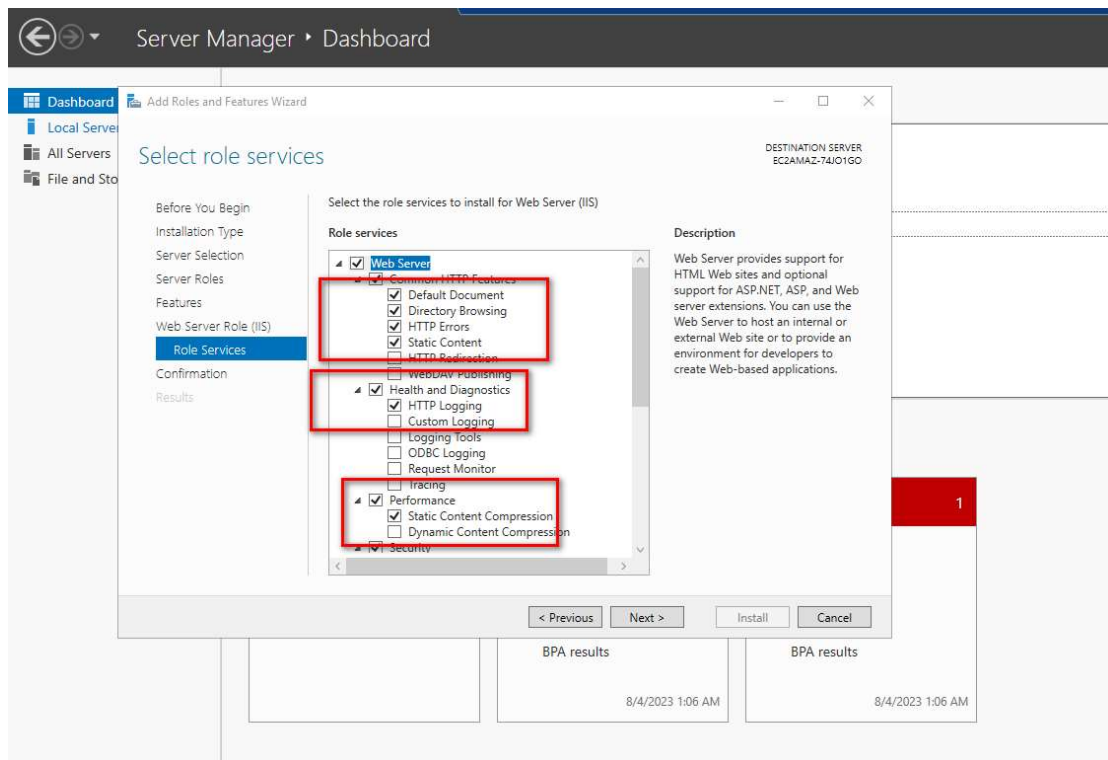

4. Check "Web Server (IIS)" and go to the next step

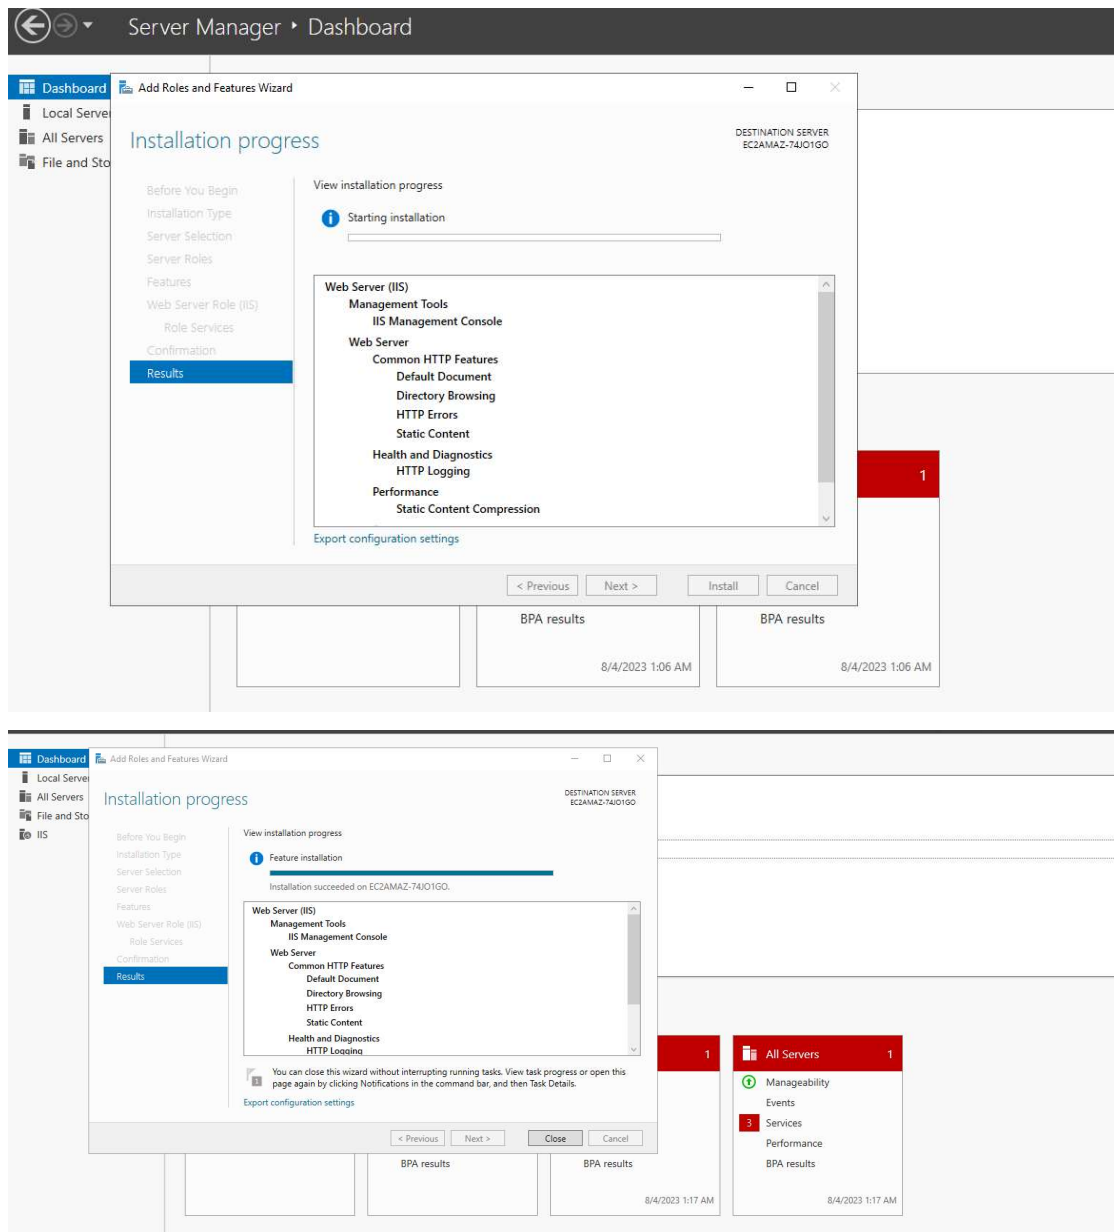

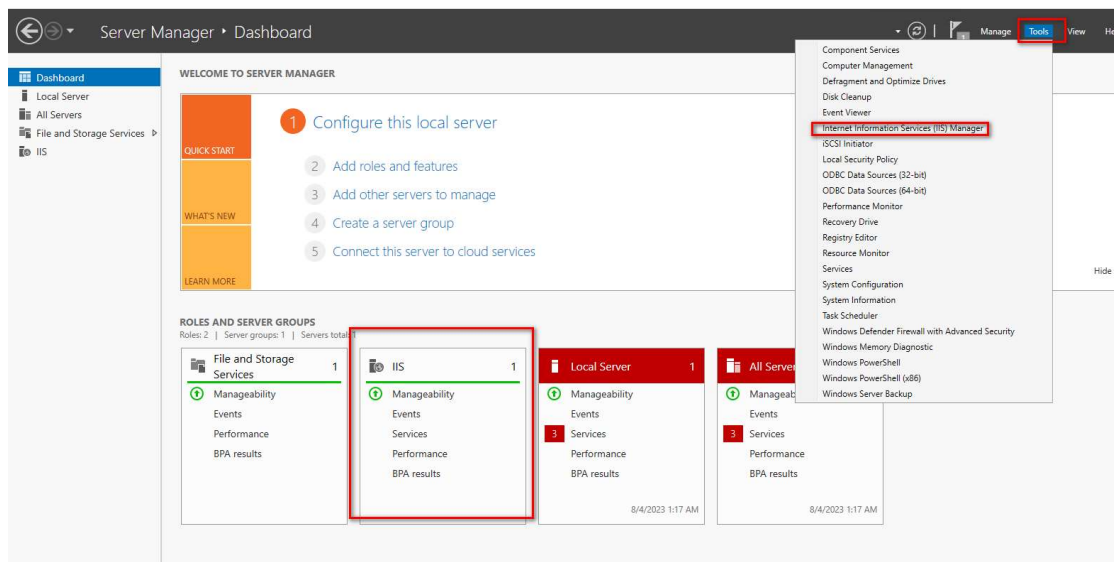

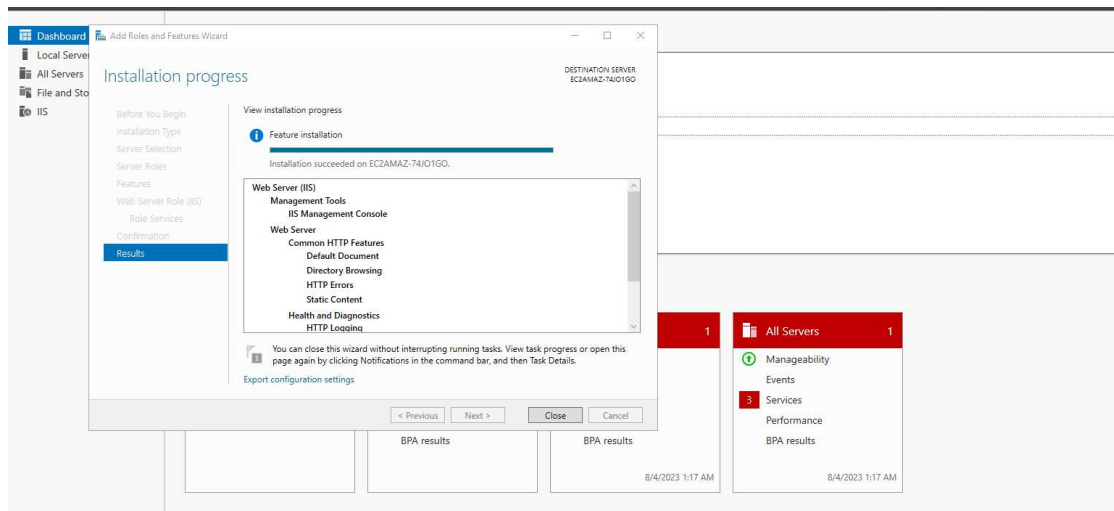

5. Validation role service

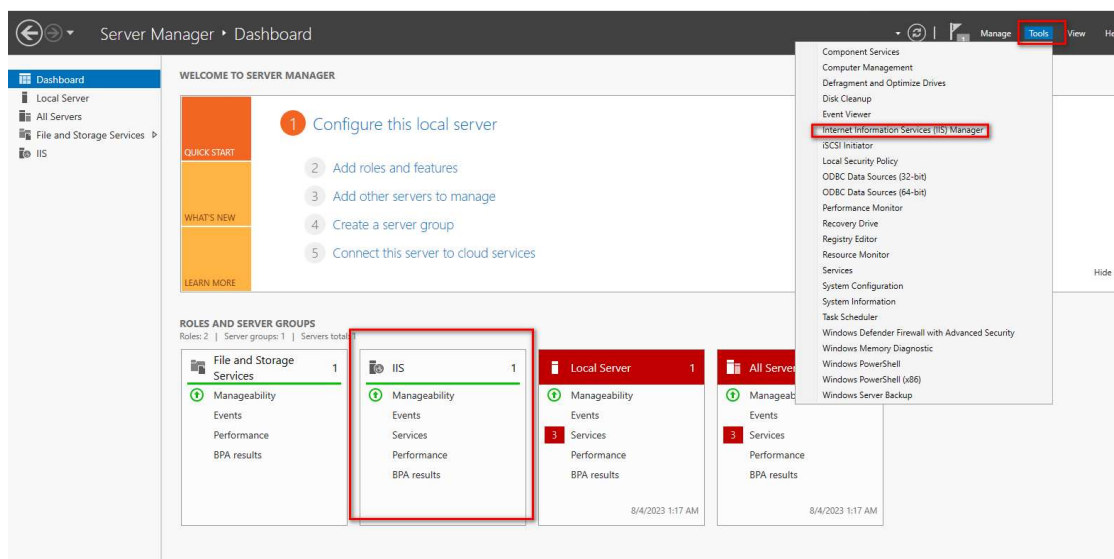

6. Confirm installation

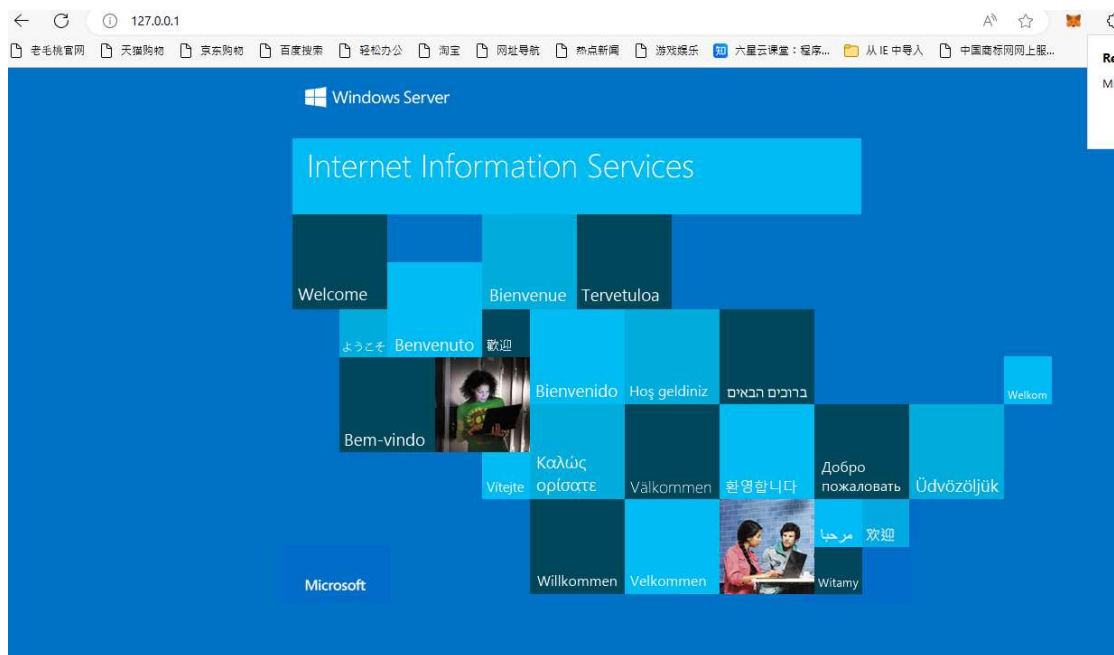

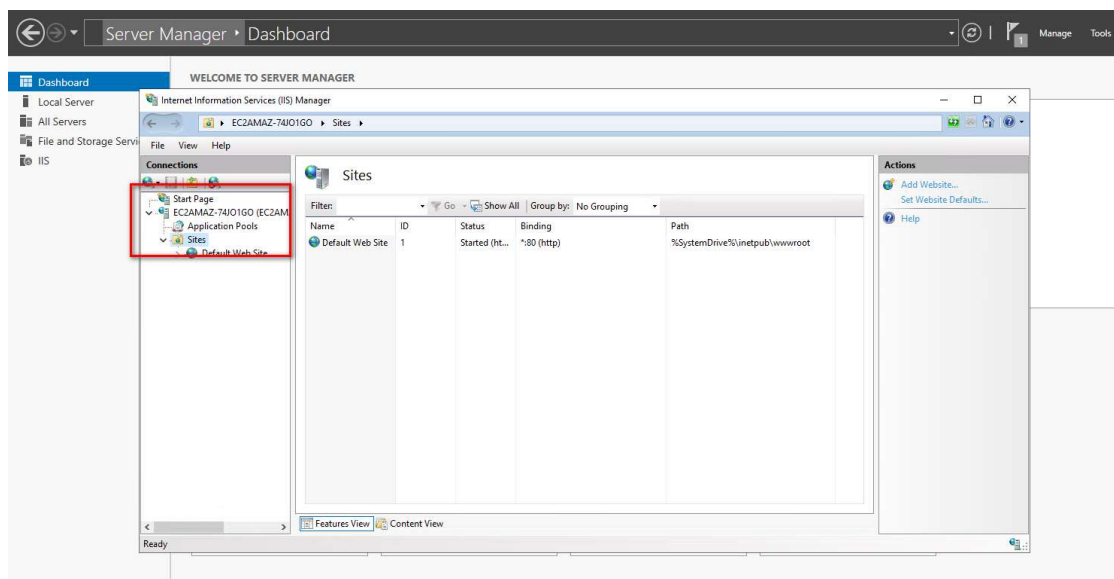

7. After the installation is complete, click the tool in the upper right corner and click the first IIS Manager in the drop-down list.

8. IIS Manager opens the interface as follows, you can right-click on the left to add their own website;

9. Copy hello-1.html to the default web directory on IIS and open hello-.html
